

**CHURCHLANDS
SENIOR HIGH SCHOOL**

2025

Year 9 & 10

Subject Selection Booklet

SUBJECT SELECTION

This booklet, together with the guidance from teachers, will assist you to select your subjects for next year.

There are some subjects which are compulsory and some which you can select depending on your special interests and abilities.

COMPULSORY SUBJECTS

All students are required to do:

- i) English, Mathematics, Science and Humanities & Social Sciences. These subjects cover four periods each per week.
- ii) All Year 9 students study two periods of Languages per week. You must continue with the language you studied in Year 8 – Japanese or French.
- iii) Two periods of Physical Education per week.
- iv) One period of Health Education per week.

ELECTIVE SUBJECTS

- i) Information on all Middle Secondary School subjects offered at Churchlands SHS is contained in this booklet.
- ii) Students will use the Subject Selection Online (SSO) Program to make their selections for 2025.
- iii) Additional information regarding SSO log on and completion instructions will be made available to students and parents.
- iv) Students in Year 9 will use SSO to make their TWO subject selections for each Semester (FOUR for the year) and to choose TWO subject reserves for each semester.
- v) Students in Year 10 will use SSO to make their THREE subject selections for each Semester (SIX for the year) and to choose TWO subject reserves for each Semester.
- vi) The following subject selections will be pre-generated and allocated by the school:
 - Year 9 Languages
 - Year 9 and 10 GATE Music and General Music
 - Year 9 and 10 Special Swimming and Special Football
 - Year 9 and 10 General Physical Education for all students apart from those in a Special Sporting Program mentioned above
 - Year 9 and 10 English, Mathematics, Science and Humanities & Social Sciences

Please note: Students need to choose at least ONE subject from The Arts and at least ONE subject from Technologies (over the year). Students need to make their selections carefully. Once the timetable is completed, changes can only happen if there are spaces left in the classes.

DUE DATE FOR STUDENTS TO COMPLETE SSO: Thursday 18 July 2024

Note:

- Course codes ending with S1 represent courses offered in Semester 1.
- Course codes ending with S2 represent courses offered in Semester 2.
- Course codes with neither S1* nor S2* indicate that it is a course that is the same for both semesters and is to only be chosen once.

This handbook provides details for courses available in Years 9 - 10.

ENGLISH

Rationale

The study of English is central to the learning and development of all young Australians. It helps create confident communicators, imaginative thinkers and informed citizens. It is through the study of English that individuals learn to analyse, understand, communicate with and build relationships with others and with the world around them. The study of English helps young people develop the knowledge and skills needed for education, training and the workplace. It helps them become ethical, thoughtful, informed and active members of society.

The Western Australian English Curriculum also helps students to engage imaginatively and critically with literature to expand the scope of their experience. The curriculum acknowledges the contribution Aboriginal people have made to Australian society, including through their traditions and contribution to contemporary culture. Intercultural understandings are further developed by promoting an appreciation of the diverse cultures of Asia. Students are also provided with opportunities to investigate and communicate ideas related to sustainability and to advocate for a sustainable future.

YEAR 9		YEAR 10	
Semester 1	Semester 2	Semester 1	Semester 2
		Journalism, Communications Introduction JNL10S1	Journalism, Communications and Beyond JNL10S2

ENGLISH (COMPULSORY)

Content Structure

The Western Australian Curriculum: *The English Curriculum* is organised into three interrelated strands that support students' growing understanding and use of Standard Australian English (English). Together the three strands focus on developing students' knowledge, understanding and skills in listening, reading, viewing, speaking and writing. The three strands are:

- *Language*: knowing about the English language.
- *Literature*: understanding, appreciating, responding to, analysing and creating literature.
- *Literacy*: expanding the repertoire of English usage.

Strands and sub-strands

Content descriptions in each strand are grouped into sub-strands that, across the year levels, present a sequence of development of knowledge, understanding and skills.

Modes

The processes of listening, speaking, reading, viewing and writing, also known as language modes, are interrelated and the learning of one often supports and extends learning of the others. To acknowledge these interrelationships, content descriptions in each strand of the Western Australian Curriculum: English incorporate the processes of listening, speaking, reading, viewing and writing in an integrated and interdependent way.

Selecting English Subjects

All students are required to complete Year 7, 8, 9 and 10 English. They will have the opportunity to work at their highest possible level, irrespective of the specific class in which they are enrolled.

Assessment

All middle secondary students will be given a semester grade for English which will reflect their achievement across the strands. Moderation of assessments between classes and comparability tasks maintain consistent assessment standards across all year groups.

Additional Costs

There may be additional costs up to approximately \$45 to cover such activities as drama excursions, visiting speakers, competitions, attending seminars and workshops at the Fremantle Children's Literature Centre.

ENGLISH (OPTIONAL)

YEAR 10

JNL10S1 JOURNALISM, COMMUNICATIONS INTRODUCTION

Do you want to be part of a dynamic news team? Learn how to write and present the news to the Churchlands community? *Then the Journalism, Communications Introduction Course is for you!*

You will not only learn how to write and present the news, but also learn professional writing skills for careers in publishing, politics, marketing or advertising. You will develop skills in interviewing, research and publication and work on your very own news program. The news is now, so it's time to get started!

YEAR 10

JNL10S2 JOURNALISM, COMMUNICATIONS AND BEYOND

Have you ever thought how cool it would be to be an investigative Journalist? To crack all the big stories? *Then Journalism, Communications and Beyond is the course for you.* You will be immersed in the world of current affairs and learn to present and write about issues that are important. The course builds on the interviewing, research and writing skills developed in the Journalism, Communications Introduction course and takes them to a new level. You will have opportunities to develop and present stories into a broadcast or written format. This course is Churchlands answer to *60 Minutes*, so don't waste any time! The clock is ticking!

HEALTH AND PHYSICAL EDUCATION – HEALTH EDUCATION (COMPULSORY)

YEAR 9

HE 9 S1 and HE 9 S2 HEALTH

This course enables students to broaden their knowledge of the factors that shape their personal identity and the health and wellbeing of others. They develop their ability to make informed decisions, with opportunities to enhance and exhibit attitudes and values that promote a healthy lifestyle. A range of contexts that include alcohol and drugs, sexuality and respectful relationships, mental health and healthy decision making are used to achieve these outcomes.

YEAR 10

HE10 S1 and HE10 S2 HEALTH

This course enables students to begin to focus on issues that affect the wider community. They consider health decisions, to develop and refine communication techniques and apply analytical skills to scrutinise health messages. They have opportunities to develop, enhance and exhibit attitudes and values that promote a healthy lifestyle. A range of contexts that include sexuality and respectful relationships, road safety, mental health, health promotion and healthy decision making are used to achieve these outcomes.

HEALTH AND PHYSICAL EDUCATION – PHYSICAL EDUCATION (COMPULSORY)

Physical Education **compulsory** courses are a part of a four year program in which students are taught a range of physical skills which form the basis of the major games played in our community. Students will also be expected to develop knowledge of rules, strategies and tactics involved in each activity and to be able to work co-operatively and responsibly with other students.

YEAR 9

PEB9 S1 BOYS PHYSICAL EDUCATION

Students will complete modules in tennis and ultimate frisbee.

PEG9 S1 GIRLS PHYSICAL EDUCATION

Students will complete modules in cricket and European handball.

PEB9 S2 BOYS PHYSICAL EDUCATION

Students will complete modules in athletics, cricket and European handball.

PEG9 S2 GIRLS PHYSICAL EDUCATION

Students will complete modules in athletics, ultimate frisbee and tennis/table tennis.

YEAR 10

PEB10S1 BOYS PHYSICAL EDUCATION

Students will complete modules in aquatics, basketball and softball.

PEG10S1 GIRLS PHYSICAL EDUCATION

Students will complete modules in AFL, softball and basketball.

PEB10S2 BOYS PHYSICAL EDUCATION

Students will complete modules in athletics, AFL and volleyball.

PEG10S2 GIRLS PHYSICAL EDUCATION

Students will complete modules in athletics, volleyball and basketball.

HEALTH AND PHYSICAL EDUCATION – OUTDOOR EDUCATION (OPTIONAL)

Note: This course may involve an early start or go through recess or lunch during the school day.

YEAR 9

OED9 OUTDOOR EDUCATION (choose one semester only)

Prerequisite – Complete a 200m swim in 7 minutes, and float unassisted for 15 minutes, a Run-Swim-Run (300m in total) and a “C” Grade or higher in Year 8 Physical Education, or a ‘C’ Grade from a special program (Football or Swimming).

This course is designed to introduce students to Outdoor Education and the main emphasis will be to care for themselves, others and the environment. The course covers the activities of surfing, rock climbing, team building, aquatic activities and bushwalking. Equipment and instruction for some activities are provided by outside agencies. This course culminates in a one day Lancelin Beach visit that is not assessed and not compulsory. It is held at the end of Term 4 and students from both Semester 1 and Semester 2 will be invited.

YEAR 10

OED10 OUTDOOR EDUCATION (choose one semester only)

Prerequisite – Complete a 200m swim in 7 minutes and float unassisted for 15 minutes, a Run-Swim-Run (300m in total) and a ‘C’ Grade or higher in Year 9 Physical Education, or a ‘C’ Grade from a special program (Football or Swimming).

This course is a participation based course that is designed to help the students feel confident in the outdoors. The course covers canoeing, surfing, basic first aid, roping, camp cooking and camp craft skills. The course culminates in a three day camp that is not assessed and not compulsory. Students will be invited to attend the camp based on their behaviour, participation and performance during the semester (a mark of 65% or better). The cost of the camp is approximately \$80 per student.

HEALTH AND PHYSICAL EDUCATION – PHYSICAL EDUCATION (OPTIONAL)

YEAR 9

BAS9 S1 and BAS9 S2 BASKETBALL

Prerequisite - a ‘B’ Grade or higher for Year 8 Physical Education, or a ‘C’ Grade from a special program (Football or Swimming)

To be successful in this program, students should currently play Basketball at a club level and possess an above average level of skill. The course focuses on the development of individual Basketball skills and team strategy. Students will also have the opportunity to develop skills such as leadership, coaching, teamwork, competitiveness and responsibility in the context of a team sport. The course also provides an opportunity to participate in state competitions and a pathway to our USA Basketball Tour, ATAR Physical Education Studies and Certificate II Sports Coaching.

NET9 S1 and NET9 S2 NETBALL

Prerequisite – a ‘C’ Grade or higher in Year 8 Physical Education, or a ‘C’ Grade from a special program (Football or Swimming)

This course aims to develop individual netball skills so that players get more satisfaction from their netball. A focus will be on the development of advanced netball skills with an emphasis on team attacking and defensive strategies. Students will acquire some basic coaching strategies and develop competent umpiring skills. Focus in the netball course is directed towards learning and refining more advanced skills in closed and competitive environments, along with the development of general game structure and strategy.

SPS9 S1 and SPS9 S2 SPORTS SCIENCE

Prerequisite - a 'B' Grade or higher for Year 8 Physical Education, or a 'C' Grade from a special program (Football or Swimming)

This course has been designed to provide students with the opportunity to establish base theoretical knowledge and practical skills in preparation for Year 11 and 12 Physical Education courses. The course will focus on key concepts in Physical Education Studies that has an emphasis in improving and understanding sporting performance. Learning in this course will involve both the study of key theoretical concepts closely integrated with active participation in physical activities. Students will partake in one practical and one theoretical lesson each week. The integration of practical performance and theory is fundamental to this course. Students choosing this elective should have an interest in ATAR and/or General Physical Education Studies in senior school.

SAC9 S1and SAC9 S2 STRENGTH AND CONDITIONING

Prerequisite – Not applicable

The Strength and Conditioning course is designed to introduce students to the basics of weightlifting. It will benefit those who have an interest in improving their fitness, specifically increasing their muscle strength and tone. The course will utilise the weights room which has state of the art equipment, including six fully fitted out weight cages with Olympic bars, benches, pre-loaded barbells, dumbbells and kettlebells. The course will have a technique emphasis so students can lift weights with safe and correct form. Additionally, students will be introduced to the major muscle groups and a variety of specific muscle exercises and weightlifting programs that will provide them with the skills and expertise to continue their weight training at gyms outside of school hours. This course is suitable for all students.

YEAR 10**BAS10S1 and BAS10S2 BASKETBALL**

Prerequisite - a 'B' Grade or higher for Year 9 Physical Education, or a 'C' Grade from a special program (Football or Swimming)

To be successful in this program, students should currently play Basketball at a club level and possess an above average level of skill. The course focuses on the development of individual Basketball skills and team strategy. Students will also have the opportunity to develop skills such as leadership, coaching, teamwork, competitiveness and responsibility in the context of a team sport. The course also provides an opportunity to participate in state competitions and a pathway to our USA Basketball Tour, ATAR Physical Education Studies and Certificate II Sports Coaching.

GFT10S2 GIRLS FITNESS

Prerequisite – Not applicable

Physical fitness is an important and significant part of many people's lives and makes a definitive difference in student's health and wellbeing. Whilst organised sports are a part of keeping physically and mentally fit, fitness activities are growing more popular by the day. This course is designed to introduce students to a variety of group fitness activities such as yoga, Zumba, Pilates, boxing and circuit training as well as teaching students to design their own accessible home workouts. It involves activities students can continue into their life after school Physical Education and allows them to experience and become comfortable in a range of exercise settings they are likely to find later in life. The benefits of individual and group fitness activities not only align to the physical aspect but also the social and emotional aspect of a person's overall wellbeing.

NET10S1 and NET10S2 NETBALL

Prerequisite – a 'C' Grade or higher in Year 9 Physical Education

This course aims to develop individual netball skills so that players get more satisfaction from their netball, with a focus on the development of advanced netball skills in the specialist areas of shooting, centre-court and circle defence. Students will acquire basic coaching strategies and develop competent umpiring skills. Focus is directed towards developing strength and stamina, maintaining and/or improving fitness, implementing tactics, learning and refining more advanced skills in closed and competitive environments, along with the development of general game structure and strategy.

RAQ10S1 and RAQ10S2 RACQUETS

Pre-Requisite – a 'C' Grade or higher in Year 9 Physical Education

This course is designed to provide students with the opportunity to extend skills and knowledge in Tennis, Badminton and Squash. Consideration will be given to advanced strategies and tactics. A basic grounding in the three sports would be an advantage to students choosing this elective.

SPS10S1 and SPS10S2 SPORTS SCIENCE

Prerequisite – a 'B' Grade or higher in Year 9 Physical Education, or a 'C' Grade from a special program (Football or Swimming)

This course has been designed to provide students with the opportunity to establish base theoretical knowledge and practical skills in preparation for Year 11 and 12 Physical Education courses. The course will focus on key concepts in Physical Education Studies that has an emphasis in improving and understanding sporting performance. Learning in this course will involve both the study of key theoretical concepts closely integrated with active participation in physical activities. Students will partake in one practical and one theoretical lesson each week. The integration of practical performance and theory is fundamental to this course. Students choosing this elective should have an interest in ATAR and/or General Physical Education Studies in senior school.

SAC10S1 and SAC10S2 STRENGTH AND CONDITIONING

Prerequisite – Not applicable

The Strength and Conditioning course is designed to introduce students to the basics of weightlifting. It will benefit those who have an interest in improving their fitness, specifically increasing their muscle strength and tone. The course will utilise the weights room which has state of the art equipment, including six fully fitted out weight cages with Olympic bars, benches, pre-loaded barbells, dumbbells and kettlebells. The course will have a technique emphasis so students can lift weights with safe and correct form. Additionally, students will be introduced to the major muscle groups and a variety of specific muscle exercises and weightlifting programs that will provide them with the skills and expertise to continue their weight training at gyms outside of school hours. This course is suitable for all students.

HEALTH AND PHYSICAL EDUCATION - SPECIAL PHYSICAL EDUCATION PROGRAMS -

YEAR 9

FTB9 S1 and FTB9 S2 SPECIAL FOOTBALL

This is a school based specialist program where students with a high degree of skill and interest in Australian Rules Football are exposed to training which may lead to successful achievement in the WAFL talent pathway and greater enjoyment of football at school. Students are expected to possess a high degree of skill and this must be accompanied by a positive attitude and a high pursuit of excellence.

SSW9 S1 and SSW9 S2 SPECIAL SWIMMING

This is a program that focuses on extending the skills, technique and water safety of already highly competent swimmers. It is a combination of squad training in the school pool with a professional swimming coach, working with Surf Life Saving WA at various beaches, and having opportunities to experience other water based activities.

YEAR 10

FTB10S1 and FTB10S2 SPECIAL FOOTBALL

This is a school based specialist program where students with a high degree of skill and interest in Australian Rules Football are exposed to training which may lead to successful achievement in the WAFL talent pathway and greater enjoyment of football at school. Students are expected to possess a high degree of skill and this must be accompanied by a positive attitude and a high pursuit of excellence.

SSW10S1 and SSW10S2 SPECIAL SWIMMING

This is a program that focuses on extend the skills, technique and water safety of already highly competent swimmers. It is a combination of squad training in the school pool with a professional swimming coach, working with Surf Life Saving WA at various beaches, and having opportunities to experience other water based activities.

HUMANITIES AND SOCIAL SCIENCES (HASS)

HASS – GENERAL (COMPULSORY)

Humanities and Social Sciences is the study of human behaviour and interaction in social, cultural, environmental, economic and political contexts. The Humanities and Social Sciences (HASS) is made up of four disciplines as mandated by the WA Curriculum: Civics and Citizenship, Economics and Business, Geography and History. All students from Years 7 – 10 will study all four of these disciplines or subjects over the course of each year (one per term). The four Humanities and Social Sciences subjects provide students with the knowledge and skills they need to develop a broad understanding of the complex world in which we live and how people can participate as active and informed citizens.

The development of knowledge and understanding in Humanities and Social Sciences is a crucial attribute in identifying key concepts, analysing critically and engaging higher level thinking. In HASS therefore, there is a considerable focus on the development of these unique key skills across all years of schooling. These skills are valuable and transferable into other disciplines.

HASS Skills:

Questioning and research: Develop questions about events, developments, issues and/or phenomena: collect and organise information, evidence and/or data, from primary and secondary sources.

Analysing: Interpret information, evidence and/or data to identify key points or ideas, points of view, perceptions and interpretations; identify the purpose of sources and determine their accuracy and reliability.

Communicating and reflecting: Present findings in appropriate forms for different audiences and purposes using subject specific terminology; reflect on conclusions/findings to consider consequences.

Evaluating: Propose explanations for events, challenges, developments, issues and or phenomena: draw evidence based conclusions and explanations; and suggest courses of action in response to events, challenges, developments, issues and/or problems. The knowledge, skills and values acquired during the Middle Secondary Program will equip students to successfully complete one or more of the Senior Secondary Courses of Study:

- Accounting/Accounting General
- Ancient History
- Certificate II (Bus) Cert III/IV in Business
- Business Management and Enterprise
- Economics
- Geography/Geography General
- Modern History/Modern History General
- Politics and Law
- Philosophy and Ethics

In HASS there are five electives offered:

- Ancient History (Year 9 and 10)
- Modern History (Year 9 and 10)
- Business Education (Year 9 and 10)
- Philosophy and Ethics (Year 9 and 10)
- Aboriginal and Intercultural Studies (Year 10 only)

HASS – ANCIENT HISTORY (OPTIONAL)

YEAR 9

HIA9 S1 WORLD MYTHOLOGY

World Mythology is all about exactly that – mythology from all around the world! Students will gain an understanding of the various ancient religions of the world – such as Ancient Egyptian and Ancient Norse religion, but also of still surviving ancient religions such as Buddhism. With this knowledge behind them students will then explore some of the more specific myths and stories of the world that still are loved in the modern day. Some notable examples of topics covered include death in Ancient Egypt, the chaotic adventures of Thor & Loki, and the end of the world itself.

HIA9 S2 GREEK MYTHOLOGY

This course focuses on the myths and legends of the Ancient Greeks. Students will first learn about the pantheon of the Greek gods, how they were created and how they bickered terribly like any good family should. From there students will delve deep into the classic stories that the Greeks have left us over 2,000 years ago. These will include looking at Hercules and his 12 Labours, the Trojan War and the epic adventures of Odysseus himself.

YEAR 10

HIA10S1 CLASSICAL GREECE

This course will focus on Classical Greece, which has given the modern world so many important ideas in politics, philosophy, drama and even maths and science. Students will learn about many of these important key ideas that the Ancient Greeks gave us, such as democracy and how we should live our lives the best we can. However, it is not all peaceful conversation, and much of the course will also investigate the terrible wars and chaos that engulfed ancient Greece. This is the perfect chance to learn about famous names like Alexander the Great, Socrates and Leonidas of Sparta.

HIA10S2 THE RISE AND FALL OF ROME

Rome ruled much of the world for around 1,000 years, and in this course students will be learning how they did it – and what happened to them. There will be no shortage of great heroes such as Julius Caesar to learn about, but there will also be plenty of terrible and dangerous leaders such as the mad Emperor Caligula. Students will examine the great heights of Roman knowledge, architecture and military might, but also Rome's lowest points full of chaos, murder and destruction.

HASS – ABORIGINAL AND INTERCULTURAL STUDIES (OPTIONAL)

YEAR 10

AIS10 ABORIGINAL AND INTERCULTURAL STUDIES (choose one semester only)

Do you want to learn about the oldest continuous living culture in the world?

In this course, students learn about the diversity of Indigenous societies in Australia and explore a wide range of political, social, historical, legal and environmental issues from an intercultural perspective. They analyse Indigenous Peoples' experiences in contemporary Australian society, using a range of approaches.

The Indigenous Studies course provides for both Aboriginal and non-Aboriginal students to explore 'shared histories' and involve themselves in active reconciliation.

HASS – MODERN HISTORY: EXPLORING THE 20TH CENTURY (OPTIONAL)

YEAR 9

HIM9 S1 SLAVES AND CONVICTS

Bound, shackled and stolen from their homes and sent to work on plantations in far off lands – this was the fate of tens of thousands of African people. Our world today was built on the back of human misery and enslavement. The Industrial Revolution changed the way people lived and worked. Cities grew rapidly as industrial production increased, fuelling the demand for cheap raw materials, labour and new markets. In this unit, students will examine the origins of the Trans-Atlantic slave trade, what life was like for slaves in the USA and Caribbean and the events that led to the abolition of slavery. As cities grew, the rates of crimes increased dramatically leading to a demand for an alternative solution to deal with the problem. Students will examine the nature of crimes and punishments, the transportation of convicts to new worlds and their lives and contributions to those places.

HIM9 S2 HEROES AND VILLAINS OF THE MODERN WORLD

A terrorist to one, is a hero to another. The Modern World has seen the development of new ideas and the emergence of many different types of leaders. These vary from those who sought control and power to those who fought for change and equality. Students will examine various figures from the 18th to the 20th century such as Ned Kelly (bushranger), Jandamarra (Aboriginal resistance fighter), Joseph Stalin (Soviet leader), Nancy Wake (resistance fighter in World War Two), Adolf Hitler, Nelson Mandela and Mahatma Gandhi. They will assess the role of these leaders in their country and explore the various perspectives on their abilities and actions.

YEAR 10

HIM10S1 WORLDWIDE FREEDOM FIGHTERS (1945-PRESENT)

Have you ever wondered why Martin Luther King Jnr had a dream or who Malcolm X was? Or why sitting at the back of the bus isn't so cool for some people? Well then this is the course for you! In this unit students will look at the struggles experienced in both the United States and Australia for Civil Rights. This course will focus on the background of the United States Civil Rights movement, with the Jim Crow laws and segregation in the South, to the hard fought gains won by people like Rosa Parkes and the NAACP. Parallel to the American experience is the Australian one, where people such as Vincent Lingiari, Eddie Mabo and Charles Perkins focussed Australian and international attention on the inequities within Australian society.

HIM10S2 THE ENVIRONMENT MOVEMENT (1960-PRESENT)

Our environment is vital to all of us, and it is important to understand how our history has impacted it. This unit is about our society and the growth of the environmental movement in Australia in the 20th century, investigating effects on the environment as a result of a rising global population and increases in urbanisation, production and trade. In this unit students will explore the background to environmental awareness, including the 19th century National Parks movement. Students will also study significant events that contributed to awareness of environmental issues, such as the nuclear accident at Chernobyl and mining controversies in Australia. Students will develop an understanding for how governments have responded to environmental threats since the 1960s, including deforestation and climate change.

HASS – BUSINESS EDUCATION (OPTIONAL)

YEAR 9

PWC9 PERSONAL WEALTH CREATION

Money doesn't buy happiness, but it can buy a jet ski... This financial literacy subject develops your ability to understand how money works in the world as well as how we earn, manage and spend it sustainably in our lives. You will develop plans to create and maintain wealth, budget, save, pay tax and invest. Perhaps most importantly, you learn how to spend - by building blueprints to purchase your first car, manage a mobile phone plan, market ourselves to employers and keep credit cards under control. You will create an investment portfolio, manage risk, understand how shares are priced and how information impacts these prices. This is put into practice in the ASX Share Market game, where you will receive a virtual \$50,000 to invest over a ten-week period. You will be more confident dealing with finances, have a greater overview of our financial systems, understand how the share market works and appreciate the true value of money.

YEAR 10

BMA10S1 BUSINESS MANAGEMENT

Have you ever thought of running your own business? Got a really inventive business idea? Then this is the course for you. You will learn how to plan, market and run a profit-making micro-business. At the end of the course, you will be set up to continue your studies in Business Management and Enterprise in Year 11 and 12.

ACC10S2 ACCOUNTING

Do you make your bed every day? Super organised? Love classifying things? Then this could be the course for you. You will learn the art of basic accounting skills such as the ledger, trial balance, financial reports and the balance sheet. This is enough to satisfy even the most organised of individuals. At the end of the course, you will be set up to continue your studies in Accounting and Finance in Year 11 and 12.

HASS – PHILOSOPHY AND ETHICS (OPTIONAL)

YEAR 9

PAE9 S1 and PAE9 S2 PHILOSOPHY AND ETHICS

Some of the brightest minds in the world are convinced that we are currently living in a simulation. Are they correct? This unit utilises audio-visual texts such as *The Good Place*, *The Matrix* and *Rick and Morty* to introduce and examine this question and others like it. The course focuses on “doing” Philosophy and through the numerous opportunities to discuss their opinions and ideas, students are able to develop self-confidence and improve their critical thinking skills. As well as reflecting on perceptions of reality we will explore the themes and questions raised in Philosophy such as Plato's Allegory of the Cave, Descartes Evil Demon and various classical philosophical thought experiments such as The Experience Machine and the Brain in the Vat.

YEAR 10

PAE10S1 and PAE10S2 PHILOSOPHY AND ETHICS

Would you willingly eat a pig that wanted to be eaten? Is it ever ok to kill another person? Should we always sacrifice the few to save the many? These questions have been discussed in philosophy for millennia. Philosophy is a re-emerging field of study in universities and schools globally. The reason for this is that many of the problems of the future will be philosophical problems. As new technology emerges, philosophical reasoning becomes more and more important. Examples of this can range from programming self-driving cars to make “good” ethical decisions to considering that artificial intelligence may one day develop enough “consciousness” to be deserving of human rights. The course focuses on “doing” philosophy and through the numerous opportunities to discuss their opinions and ideas, students are able to respond to these issues, develop self-confidence and improve their critical thinking skills.

LANGUAGES

- Students are required to continue with the same language from Year 7 to Year 9 as the content builds on previous knowledge.
- The study of a language is optional in Year 10. If a Language is chosen it should be the same as previously studied.

Why should you learn a language?

- ### 01 You have more opportunities

 - It helps you get into university
 - You are more competitive on the job market
 - You can work and live overseas
 - You get to go on study tours
- ### 02 Your literacy skills are enhanced

 - You learn how languages work, which supports literacy.
 - You are taught transferable skills
 - You develop your reading and writing skills
- ### 03 You have a deeper understanding of cultures

 - You have a better understanding of your own cultures and values and those of others around the world
 - You build empathy and become more tolerant
- ### 04 You become a better version of yourself

 - You develop your self-confidence
 - You have better communication skills
 - You learn from your mistakes
 - You become more resilient and open-minded
- ### 05 It is like having a superpower

 - It boosts your brain power
 - It improves your memory
 - You become a better multi-tasker, problem-solver and creative and critical thinker

Illustrations include cherry blossoms, a graduation cap, an open book, a globe, a thumbs up, a superhero, the Eiffel Tower, a person holding a 'Bonjour' sign, the French and Japanese flags, and Mount Fuji with a person holding a 'こんにちは' sign.

LOTE BONUS IN SENIOR SCHOOL

10% of a student's final score in a Languages subject will be added to their ATAR *even if it is not in the student's top four subjects*. (depends on TISC's decision before the end of the year)

LANGUAGE TOURS AND EXCHANGE PROGRAMS

Have you always wanted to experience the daily life and culture of another country? Would you love to visit famous places like the Eiffel Tower, or Mt Fuji? What about experiencing what school is like in a different country? Then a language tour is for you! There are opportunities for our students to participate in tours with their peers when they travel to France, Japan or Reunion Island and stay with students from our sister schools. They will also be able to visit places of cultural and historic significance. Students also have the opportunity to host students from our sister schools when they visit Perth. This is a fantastic way to learn about language and culture first-hand and make real international friendships. Opportunities to apply for scholarships and external exchange programs also exist for students.

Please Note: Tours and exchanges are subject to approval and travel restrictions.

CAREER POSSIBILITIES

A range of careers open up to you when you can speak another language. These include, but are not limited to careers in hospitality, travel, law, diplomacy, entertainment, commerce, engineering, medicine, science, teaching, translating and interpreting. Employers in all fields recognise the advantage of multi-lingual employees in our global economy.

YEAR 9 (Compulsory)		YEAR 10 (Elective)	
Semester 1	Semester 2	Semester 1	Semester 2
French FRE9 S1	French FRE9 S2	French FRE10S1	French FRE10S2
Japanese JPN9 S1	Japanese JPN9 S2	Japanese JPN10S1	Japanese JPN10S2

YEAR 9

Students learn to appreciate the communication skills they have acquired in the target language and begin to express themselves more freely. They increase their understanding of the language and how language and culture belong together.

Prerequisite: Year 8 Semester 2 at Churchlands SHS in the chosen language or permission from the Head of Learning Area to change languages or to study two languages.

TOPICS COVERED IN YEAR 9

	French FRE9 S1	Japanese JPN9 S1
Semester 1	Out and About Learn about places in town and directions. Planning a trip What must be done before a trip?	Are you Busy? Discussing your daily routine. School Life Learning is fun!
	French FRE9 S2	Japanese JPN9 S2
Semester 2	Let's Travel! Countries of the world and discussing holidays, transport and accommodation. Let's celebrate! Celebrations and festivals, traditional food and international cuisine	My Space Describe your home and neighbourhood. Let's Make a Snowman! Discuss a range of seasonal activities and the weather.

YEAR 10 FRENCH

Students strengthen their communication and comprehension skills in the target language and will be provided with language skills and intercultural knowledge to enable them to communicate in social and workplace situations in the target language. They enhance their understanding of the relationship between language and culture as they develop into global citizens. **Students must select the same Language in both semesters and understand it is a year-long course.**

Please Note:

- **Prerequisite: Year 9 in the chosen language or permission from the Head of Learning Area to change languages or to study two languages.**
- **Year 10 French is a prerequisite for Year 11 French: Second Language ATAR.**
- **Year 10 Japanese is a prerequisite for Year 11 Japanese: Second Language ATAR.**

YEAR 10 JAPANESE

Students strengthen their communication and comprehension skills in Japanese and will be provided with language skills and intercultural knowledge to enable them to communicate in social and workplace situations in Japanese. They enhance their understanding of the relationship between language and culture as they develop into global citizens. **Students must select the same Language in both semesters and understand it is a year-long course.**

Please Note:

- **Prerequisite: Year 9 in the chosen language or permission from the Head of Learning Area to change languages or to study two languages.**
- **Year 10 Japanese is a prerequisite for Year 11 Japanese: Second Language ATAR.**

TOPICS COVERED IN YEAR 10

	French FRE10S1	Japanese JPN10S1
Semester 1	<p>On exchange in a French speaking country Discuss how to have spontaneous interactions and meeting people when in on exchange</p> <p>Past habits and the environment Describe your future hopes, dreams and ambitions.</p>	<p>Out and About Learn the language of shopping, dining out and socialising!</p> <p>They're so Cool! Discussing people, personality and fashion.</p>
	French FRE10S2	Japanese JPN10S2
Semester 2	<p>Healthy habits and part-time jobs Discuss healthy habits and part-time jobs for young people.</p> <p>Planning my future Discuss your choices and plans for your career and personal life in the future</p>	<p>Don't get Lost! Learn how to navigate the crazy streets of Japan.</p> <p>My Japanese Journey A reflection on the Japanese language and culture.</p>

MATHEMATICS

OVERVIEW OF COURSE CONTENT

Churchlands SHS follows the WA Curriculum in Years 7 to 10. In the Mathematics learning area students learn to use ideas about number, space and chance and mathematical ways of representing patterns and relationships. Mathematics allows people to describe, interpret and reason about their social and physical world. Mathematics plays a key role in the development of students' numeracy and assists learning across the curriculum.

MATHEMATICS SUBJECTS

Students in Years 8, 9 and 10 are organised into Pathway I, II, III or AEP according to their performance in the previous year. Students will have the opportunity to move up or down these pathways if their assessment performance merits it; dependent on a position in the appropriate pathway being available. Please note entry or exit from AEP is governed by school AEP policy.

As mathematics knowledge is cumulative through all the years, it is important that students always perform to the best of their ability. If they do not perform well, they can be moved into a lower pathway and this can jeopardise their mathematics choices for Senior School. On the other hand, students staying in a pathway to “keep your options open” is not viable unless the student is having success in that pathway.

In summary, placement in pathways is based on student results.

In Year 10, students will choose their subjects for Year 11 via SSO (Subject Selection Online). Students will only be offered a Mathematics course if they have met the prerequisites for that course. The prerequisites usually specify a grade and exam result in a particular pathway and are outlined on the Pathway's Diagram. Any student who does not meet the prerequisites for their desired course must apply to the Associate Principal Senior Secondary for dispensation to do the course.

NOTE: Course changes in Year 11 are extremely limited so careful consideration needs to be taken when choosing subjects.

MATHEMATICS PATHWAYS FROM YEAR 10 TO SENIOR SCHOOL

YEAR 10 AEP				
Year 11 Courses	Specialist Unit 1 & 2	Methods Unit 1 & 2	Applications Unit 1 & 2	Essentials Unit 1 & 2
Minimum Requirements	B Grade & 65% Exam	C Grade	D Grade	No requirement
YEAR 10 PW1 (Pathway 1)				
Year 11 Courses	Specialist Unit 1 & 2	Methods Unit 1 & 2	Applications Unit 1 & 2	Essentials Unit 1 & 2
Minimum Requirements	A Grade & 75% Exam	B Grade & 65% Exam	D Grade	No requirement
YEAR 10 PW2 (Pathway 2)				
Year 11 Courses	Specialist Unit 1 & 2	Methods Unit 1 & 2	Applications Unit 1 & 2	Essentials Unit 1 & 2
Minimum Requirements	Not recommended	Not recommended	B+ Grade & 70% Exam	No requirement
YEAR 10 PW3 (Pathway 3)				
Year 11 Courses	Specialist Unit 1 & 2	Methods Unit 1 & 2	Applications Unit 1 & 2	Essentials Unit 1 & 2
Minimum Requirements	Not recommended	Not recommended	Not recommended	C Grade

Notes:

- Specialist, Methods and Applications are ATAR subjects, while Essentials is a non-ATAR subject.
- Students who choose to do Year 11 Specialist have to do Year 11 Methods.
- Students who completed a Year 11 course may choose not to do the same course in Year 12.
- All Year 12 students who study Unit 3 & 4 will be required to sit the WACE examination in that pair of units at the end of the year unless exempt.

SCIENCE

YEAR 9

Year 9 students will study either **Science** or **AEP Science**. The course will cover the four science areas (sub-strands) below. The strand Science Understanding encompasses the four sub-strands below.

YEAR 10

Year 10 students will study either **AEP, Specialist** or **General** science depending on Year 9 performance and career aspirations. The course will cover the four Science areas (sub-strands) below. Pre-requisite for Year 10 Specialist is typically a Year 9 B Grade.

GEN: General

ATAR: Australian Tertiary Admission Rank

PATHWAY	COURSE OPTIONS IN YEAR 11	COURSE OPTIONS IN YEAR 12

Science (covered in Years 9 and 10).

Embedded in each of the Science areas (sub-strands) are two strands; Science as a Human Endeavour and Science Inquiry Skills.

CHEMICAL SCIENCES

Chemical Sciences is concerned with understanding the composition and behaviour of substances. The key concepts developed within this sub-strand are that: the chemical and physical properties of substances are determined by their structure at an atomic scale; and that substances change and new substances are produced by rearranging atoms through atomic interactions and energy transfer. In this sub-strand, students classify substances based on their properties, such as solids, liquids and gases, or their composition, such as elements, compounds and mixtures. They explore physical changes such as changes of state and dissolving, and investigate how chemical reactions result in the production of new substances. Students recognise that all substances consist of atoms which can combine to form molecules, and chemical reactions involve atoms being rearranged and recombined to form new substances. They explore the relationship between the way in which atoms are arranged and the properties of substances, and the effect of energy transfers on these arrangements.

PHYSICAL SCIENCES

Physical Sciences is concerned with understanding the nature of forces and motion, and matter and energy. The two key concepts developed within this sub-strand are that: forces affect the behaviour of objects; and that energy can be transferred and transformed from one form to another. Through this sub-strand students gain an understanding of how an object's motion (direction, speed and acceleration) is influenced by a range of contact and non-contact forces such as friction, magnetism, gravity and electrostatic forces. They develop an understanding of the concept of energy and how energy transfer is associated with phenomena involving motion, heat, sound, light and electricity. They appreciate that concepts of force, motion, matter and energy apply to systems ranging in scale from atoms to the universe itself.

BIOLOGICAL SCIENCES

Biological Sciences is concerned with understanding living things. The key concepts developed within this sub-strand are that: a diverse range of living things have evolved on Earth over hundreds of millions of years; living things are interdependent and interact with each other and their environment; and the form and features of living things are related to the functions that their body systems perform. Through this sub-strand, students investigate living things, including animals, plants, and micro-organisms, and their interdependence and interactions within ecosystems. They explore their life cycles, body systems, structural adaptations and behaviours, how these features aid survival, and how their characteristics are inherited from one generation to the next. Students are introduced to the cell as the basic unit of life and the processes that are central to its function.

EARTH AND SPACE SCIENCES

Earth and Space Sciences is concerned with Earth's dynamic structure and its place in the cosmos. The key concepts developed within this sub-strand are that: Earth is part of a solar system that is part of a larger universe; and Earth is subject to change within and on its surface, over a range of timescales as a result of natural processes and human use of resources. Through this sub-strand, students view Earth as part of a solar system, which is part of a galaxy, which is one of many in the universe and explore the immense scales associated with space. They explore how changes on Earth, such as day and night and the seasons relate to Earth's rotation and its orbit around the sun. Students investigate the processes that result in change to Earth's surface, recognising that Earth has evolved over 4.5 billion years and that the effect of some of these processes is only evident when viewed over extremely long timescales. They explore the ways in which humans use resources from the Earth and appreciate the influence of human activity on the surface of the Earth and the atmosphere.

ASSESSMENT IN MIDDLE SECONDARY

Science teachers will detail to students and parents the middle secondary Science assessment statement. Students will be assessed in each of the above four areas.

SCIENCE TECHNOLOGY ENGINEERING AND MATHS (STEM)

YEAR 9		YEAR 10	
Semester 1	Semester 2	Semester 1	Semester 2
STEM Specialist STEM9S1	STEM Specialist STEM9S2	STEM Specialist STEM10S1	STEM Specialist STEM10S2

The STEM Specialist Course provides students with a unique opportunity to undertake their own STEM-related project independently over a semester. Students are provided with resources and make use of the School's STEM Makerspace facility to undertake their own unique learning path.

Common projects in previous years include Learning a new Programming Language, Video Game Design, Electronics, Engineering, Robotics, 3D Design, 3D Printing and personal Science Experiments. Students can also use their time in the course to work on entries into competitions including Robocup, Australian STEM Video Game Competition, Solar Car Races and Pedal Prix.

Comments from previous students:

- "Fun and exciting as you get to learn about new things - otherwise you would not learn about any of this stuff."
- "You can work at your own pace with resources that you find and it is very rewarding."
- "A creative subject where you can make whatever you think of and get credit for being creative."
- "We get to work by ourselves and do what we want. The only thing limiting us is our creativity."
- "The STEM course lets me work with friends and be creative while still learning new things."
- "It's a course based on initiative and curiosity. You make things based off an idea you have."

Students can enrol in the STEM Specialist for any semester and set their own learning goals.

YEAR 9

STEM9S1 STEM SPECIALIST

Students will become familiar with common Scientific, Technological, Engineering and Mathematical skills that will enable them to complete small-scale projects during the semester. These skills will include electronics, coding (including embedded devices such as Arduino and other microcontrollers), robotics and how science and mathematics relate to these activities.

STEM9S2 STEM SPECIALIST

Students who have completed STEM9S1 will be given the opportunity to increase the level of complexity of their projects with new innovations such as 3D Printing, wearable technology and broader microcontrollers. New students can be provided with a more scaffolded approach to the elements of STEM education.

YEAR 10

STEM10S1 STEM SPECIALIST

Year 10 students are generally equipped to design a highly sophisticated long-term STEM project. The project outcomes developed by the student may include aspects of real-world problem solving, such as fire detection, disability management, real-time monitoring or clean energy. New STEM students are also welcome and can start at their own level.

STEM10S2 STEM SPECIALIST

The second semester program is similar in focus and content as the Semester 1 program, however students are encouraged to independently develop their own designs and projects once they have acquired the necessary skills and knowledge.

For more information please visit <https://stem.puseyscience.com/about/course>

TECHNOLOGIES – DIGITAL TECHNOLOGIES

YEAR 9

TPG9 S1 APP AND GAME DESIGN

Embark on an exhilarating journey into the world of App and Game Design and get ready to unleash your creativity and dive into the world of digital innovation as we introduce you to the magical realms of app development and game design. Whether you're a novice or an aspiring developer, dive into the dynamic world of mobile app creation and game development. Using user-friendly platforms and game engines tailored just for you, you'll learn how to bring your ideas to life with ease and excitement. Through hands-on tutorials and practical guidance, you'll explore the intuitive app platform to create fun and functional mobile applications, and then dive into the dynamic world of game design using a powerful game engine. Get ready to discover the thrill of coding and design as you embark on this thrilling journey with us. Let your imagination soar and join us in crafting the next generation of digital wonders!

TCG9 S2 3D AND 2D GAME DESIGN

Using state-of-the-art game engines, players can design and build their own custom islands, games, and experiences using a variety of building tools and assets provided by the game. These building tools include various materials, shapes, props, and terrain editing options. You'll learn how to build immersive 3D environments filled with vibrant props and captivating gameplay mechanics. From designing intricate levels to crafting compelling narratives, this course will empower you to bring your wildest imaginations to life in stunning detail. Using our sandbox-style game engines, players can unleash their creativity and imagination to design their own virtual worlds and gaming experiences. Whether you dream of creating fantastical worlds or challenging quests, join us and let your imagination run wild as you become a master game designer!

YEAR 10

TCP10S1 COMPUTER PROGRAMMING

This course introduces students to basic web design using HTML (Hypertext Markup Language) and CSS (Cascading Style Sheets). The course does not require any prior knowledge of HTML or web design. Throughout the course students are introduced to building web pages by writing HTML and CSS code; enhancing web pages with the use of page layout techniques, text formatting, graphics, images, and multimedia. The second part of this course focuses on the important principles of programming constructs and programming/coding skills using Python programming language. Students will investigate appropriate algorithmic approaches to problem solving and have practice in coding solutions to problems. The course provides students with early exposure to the essentials programming skills required in the senior secondary ATAR Computer Science course.

TCS10S2 COMPUTER SCIENCE

In the Computer Science Year 10 course students are introduced to the fundamental principles, concepts and essential skills within the field of computing. They learn how to diagnose and solve problems while exploring the building blocks of computing. They learn the essential skills of Data Analysis, Cyber Security, Database Management, and SQL Programming. With hands-on projects, real-world scenarios, and practical guidance, students will emerge with a robust skill set ready to tackle the challenges of tomorrow's digital landscape. This course provides students with the practical and technical skills that equip them to function effectively in a world where these attributes are vital for employability and daily life in a technological society as well as providing students with early exposure to some of the skills required in ATAR Computer Science in senior secondary.

TIC10S1 INTRODUCTION TO COMPUTERS 1

This digital literacy course is designed to help students gain valuable study and employability skills. Students will learn to use their computers more effectively and learn how to realise some of the hidden potential within their own laptops. Laptops are required to be brought to this course.

- Advanced word processing skills
- Office 365
- Advanced presentation skills
- Sound editing
- Touch typing

TIC10S2 INTRODUCTION TO COMPUTERS 2

This digital literacy course is designed to help students gain valuable study and employability skills. Students will learn to use their computers more effectively and learn how to realise some of the hidden potential within their own laptops. Laptops are required to be brought to this course.

- Personal budget spreadsheets
- Staying safe online
- Basic HTML
- Image editing
- Touch typing

TECHNOLOGIES – DESIGN TECHNOLOGY

YEAR 9

TCD9 S1 COMPUTER AIDED DESIGN (CAD)

In this course students will gain a basic understanding of CAD (2D & 3D) software to produce drawings and physical models that will not only become the foundation of design in the modern world, but also provide an environment of excitement and discovery. With the fast-paced world we live in, students will be empowered to adapt to new ideas, using design, modelling and CAD software.

These new skills will become the building blocks that can lead to endless pathways in the graphics and communication field. CSHS has the latest cutting-edge software and equipment to facilitate these learning outcomes.

Design Technologies also enriches problem solving drawing upon Mathematics, Science, Engineering and Technology.

Requirements: Open mind and great attitude.

Students will use various integrated software packages and equipment to produce physical models and real world items using the latest technology. Examples:

- Technical drawings
- Presentational drawings
- 3D Models
- Digitising hand drawn sketches
 - 3D printers
 - Laser Cutters
- Utilising desktop publishing software to translate into technical graphics

TCD9 S2 COMPUTER AIDED DESIGN (CAD)

This course is an extension to the Semester 1 Graphics course but TCD9 S1 is not a prerequisite for this course.

Students will turn existing ideas into reality using techniques learnt during the course. Design and graphical communication is the focus which will allow students to explore ideas using technology and design to make practical, artistic and technical items.

Students will draw on knowledge from MESH areas to translate these theoretical ideas into practical situations via visual communication.

Requirements: Open mind and great attitude.

Using the latest Hi-Tech equipment, students will use their skills to extend design, technical communication and problem-solving skills

Students will use:

- CAD Software
- 3D Printers
- Laser Cutters
- Various other industry standard equipment

YEAR 10

Students wishing to engage in Computer Aided Design (CAD) at a Senior Secondary level would benefit greatly by completing Year 10 CAD 2D and 3D.

TCD10S1 COMPUTER AIDED DESIGN (CAD)

There are many ways information can be processed and expressed. In this unit, students will learn how technical, artistic and theoretical ideas can be communicated in an exciting and educational way. Students will draw from their own prior knowledge and apply it in real world situations, as well as learn how to apply current technical solutions, industry standards and processes to achieve outcomes. The focus will not only include how, but also 'why' to enrich critical thinking in design and communication. STEM is a fundamental direction educators and industry are geared towards and this unit will allow the students to integrate these skills into a cohesive outcome.

Requirements: Open mind and great attitude.

Challenges will be set for students to overcome design problems utilising the student's ideas, expectations, knowledge and design skills. CSHS Technologies Learning Area is adept at technology so students can confidently follow their own path of design knowing the faculty has the expertise to reach their goals.

Students will have access to:

- Numerous CAD Software Packages
- 3D Printers
- Laser Cutters
- Vinyl Cutters
- Microcontrollers
- Rendering
- Industry standard Architecture and Structural software
- Various other industry standard equipment

TCD10S2 COMPUTER AIDED DESIGN (CAD)

The sky is the limit! CSHS Technologies Learning Area has the facilities, knowledge and equipment other schools are envious of. Using our school's equipment, students will bring their prior learning from MESH subjects to create practical examples of their theoretical knowledge, and communicate it in a range of mediums. This course sets pathways for engineers, graphic designers, draftspersons, game designers, architects, inventors and a lot more professions that don't exist yet.

Requirements: Open mind and great attitude.

Year 10 students would have developed a vast knowledge of concepts and ideas that has been acquired in complimentary subjects during their student career. Taking this knowledge, and developing it into physical solutions is the next logical step for creative and intellectual students. Although this is a graphics course, students are encouraged to use any facility available to achieve their design and communication goals.

Students will have access to:

- Numerous CAD Software Packages
- Highly trained technology teachers
- 3D Printers
- Laser Cutters
- Digital Plotters
- Vinyl Cutters
- Microcontrollers
- Rendering
- Industry standard Architecture and Structural software
- Various other industry standard equipment

YEAR 9

TJW9 S1 JEWELLERY DESIGN

This is a foundation Jewellery Design program which provides an opportunity for students to develop skills and knowledge with the tools and techniques, fundamental processes and procedures of jewellery fabrication. In addition to this, we shall incorporate various aspects of contemporary design theories, technical drawing, history, marketing and socio-economic values into their growing awareness of the world of jewellery. Students will design and make jewellery from a range of materials including wood, copper wire but mostly sterling silver.

TJW9 S2 JEWELLERY DESIGN

The second part of the Jewellery Design course extends student skill development in silver smithing. Students build on prior technical expertise which further develops their understandings of handling diverse materials of multiple jewellery processes. Lost wax casting process and glass technologies are available with our new kilns, and students can create their own unique cast and glass jewellery. For new students, the foundation Jewellery Design program will be undertaken. This unit is designed to flow into the Year 10 Jewellery Design program.

YEAR 10

TJW10S1 JEWELLERY DESIGN

The course aims to build on prior Year 9 experience enhancing student capability in Jewellery Design, although it also caters for students new to jewellery manufacture.

Advanced students are introduced to the laser cutting and engraving process using digital software to design a leather piece of jewellery. Advanced students are expected to design and develop their jewellery pieces. Design portfolios are incorporated and present the action of their work with a professional photo.

TJW10S2 JEWELLERY DESIGN

The course aims to build on prior experience enhancing student capability in Jewellery Design, although it also caters for students new to Jewellery manufacture.

Advanced students are working with Fine Silver, precious and semi-precious gems settings. Lost wax casting is used and advanced students are expected to design and develop their jewellery pieces. Portfolio presentations are essential, as well as, exhibiting their work in a professional context.

YEAR 9

TMT9 S1 MECHATRONICS

Mechatronics is a subject designed to foster students to excel in design, electronics and mechanical principles. Students of the course will translate their theoretical knowledge into practical applications. The use of Mathematics, Technology, Science, Engineering and problem solving are employed to create real world solutions.

In Semester 1, students will gain the knowledge of the fundamental principles of electronics and apply these skills. Students will make their own circuit boards as well as making their project aesthetically pleasing.

TMT9 S2 MECHATRONICS

Mechatronics is a subject designed to foster students to excel in design, electronics and mechanical principles. Students of the course will translate their theoretical knowledge into practical applications. The use of Mathematics, Technology, Science, Engineering and problem solving are employed to create real world solutions.

Students will learn how to program microprocessors to construct and control the operation of electronic components. A mix of electronics, design, mechanisms and programming skills will make a solid platform for the students to progress into a wide range of pathways.

YEAR 10

TMT10S1 MECHATRONICS

Mechatronics is a subject designed to foster students to excel in design, electronics and mechanical principles. Students of the course will translate their theoretical knowledge into practical applications. The use of Mathematics, Technology, Science, Engineering and problem solving are employed to create real world solutions.

In Semester 1, students will gain the knowledge of the fundamental principles of electronics and programming skills which will be necessary for the creation of their design and the additional Arduino systems (programming) which can be added to this. This will include technologies such as Auto CAD, 3D printing, laser cutting and circuit board design. Examples for additional systems would be a crane, launching mechanisms and surveillance equipment.

TMT10S2 MECHATRONICS

Mechatronics is a subject designed to foster students to excel in design, electronics and mechanical principles. Students of the course will translate their theoretical knowledge into practical applications. The use of Mathematics, Technology, Science, Engineering and problem solving are employed to create real world solutions.

In Semester 2, the focus in Mechatronics will be based around remote control systems and processes. This could include the manufacturing of drones and hovercrafts with the aid of virtual reality headsets. The mix of electronics, design, mechanisms and programming skills will make a solid platform for the students to progress into a wide range of pathways.

YEAR 9

TME9 S1 METALS AND ENGINEERING

Students work in a fully equipped industrial workshop and initially learn a range of welding techniques with an emphasis on safety. Students then commence the making of a set project. This activity will reinforce their welding skills and bring the introduction of lathe work into their skillset. Students will also become familiar with a range of hand and power tools.

After their set projects, students are given an opportunity to develop a project which incorporates their personal interests.

1. **Lathe work:** Machining of spinning tops, Fidgets, Cannons and BBQ utensils.
2. **Metal Sculptures:** The requirements to achieve this involves the creation of a series of sketches which explain their idea. A computer controlled Plasma cutter can be used to cut out their shapes.
3. **Fabrication Projects:** Students interested in welding projects can get involved in manufacturing mini cray pots, scooters, cricket wickets, basketball hoops, wing generators, fishing gaffs etc.

TME9 S2 METALS AND ENGINEERING

Students undertake similar welding exercises and general content to those covered in TME9 S1 such as materials, processes, machinery and power tools. However, as we recognise prior learning, students engaged in TME9 S2 tend to focus more on personal project design with attention to more complex, larger projects. Students are exposed to a larger range of equipment in a range of problem solving exercises related to their product design. As an assessment focus, particular attention is directed towards understanding materials and logical presentation of information. The technology process is reinforced in all design exercises.

YEAR 10

There are no prerequisites for these subjects.

TME10S1 METALS AND ENGINEERING

Students work in a fully equipped industrial workshop and initially learn a range of welding techniques. Students then commence the making of a set project. This activity will reinforce their welding skills and bring the introduction of lathe work into their skillset. Students will also become familiar with a range of hand and power tools.

After their set projects, students are given an opportunity to develop a project which incorporates their personal interests.

TME10S2 METALS AND ENGINEERING

Students undertake similar welding exercises and general content to those covered in TME10S1 such as materials, processes, machinery and power tools, However, as we recognise prior learning, students engaged in TME10S2 tend to focus more on personal project design with attention to more complex, larger projects. Students are exposed to a larger range of equipment in a range of problem solving exercises related to their product design. As an assessment focus, particular attention is directed towards understanding materials and logical presentation of information. The technology process is reinforced in all design exercises.

YEAR 9

TWD9 S1 WOOD TECHNOLOGY

This course introduces students to a workshop environment where the basic skills of furniture design and construction are developed. The initial focus is on using hand tools accurately and effectively to create traditional joints and then students are given opportunities to combine hand tools and machines to produce small pieces of furniture. Occupational Health and Safety Issues are covered comprehensively so that students understand the hazards and work safely. Students are also given opportunities to develop design skills including sketching, creating working drawings and procedure plans so that their workshop time is as productive as possible.

TWD9 S2 WOOD TECHNOLOGY

The second semester course gives students opportunities to refine their design and manipulative skills and gain experience on more machines such as wood lathes and routers. Understanding and using the appearance and properties of different materials is further examined with a view towards designing and producing a more professional result. Initially activities will be directed to cater for students new to the course but in the latter stages students are encouraged to produce projects based on their own design ideas.

YEAR 10

TWD10S1 WOOD TECHNOLOGY

This program introduces students to design and sets out how to enhance their projects with the addition of coloured resins. To enable this, students will learn/revise marking out, joining timbers to increase width with the domino or biscuit machine and then adding a design utilising the CNC router. Routed designs may then be filled with a coloured resin. As always, safety will be a priority and all students will be carefully instructed in the safe use of any required machines.

TWD10S2 WOOD TECHNOLOGY

There are no prerequisites for this course. Students will learn how to safely use a number of machines in the construction of a quality piece of furniture. These include the fixed router in conjunction with a template, router trimmer, domino machine and the dovetail machine. Students will also learn how to apply a suitable finish.

YEAR 9

TDG9 S1 DESIGN AND TECHNOLOGIES FOR GIRLS

Embark on a creative journey with our Design and Technology for Girls course, tailored specifically for Year 9 & 10 students! This innovative program, launching in Semester One 2025, is a vibrant addition to the Technologies Learning Area. It's not just another class; it's a pathway to the future, leading directly to Materials Design and Technology in upper school.

Our course responds to the enthusiastic demand for a girl-only program in technology. Here, young women will discover the freedom to explore a diverse range of materials and techniques, far beyond the confines of traditional woodworking. They'll design, they'll create, and they'll innovate, all within an empowering environment that celebrates their unique perspectives.

Join us and shape the world with your vision in Design and Technology for Girls - where your creativity knows no bounds!

TDG9 S2 DESIGN AND TECHNOLOGIES FOR GIRLS

The Semester 2 option for this course can be taken independently from Semester 1 or as a continuation for those who studied it in Semester 1. Our Design and Technology for Girls course is specifically tailored for Year 9 and 10 students. The Semester 2 option offers different tasks and projects, focusing on developing confidence using our available technologies and equipment. Launching in Semester One 2025, this innovative program is a vibrant addition to the Technologies Learning Area. It's not just another class; it's a direct pathway to Materials Design and Technology in upper school.

Our course addresses the enthusiastic demand for a girl-only technology program. Here, young women will explore a diverse range of materials and techniques beyond traditional woodworking. They'll design, create, and innovate within an empowering environment that celebrates their unique perspectives.

Join us and shape the world with your vision in Design and Technology for Girls, where creativity knows no bounds!

YEAR 10

TDG10S1 DESIGN AND TECHNOLOGIES FOR GIRLS

Embark on a creative journey with our Design and Technology for Girls course, tailored specifically for Year 9 & 10 students! This innovative program, launching in Semester One 2025, is a vibrant addition to the Technologies Learning Area. It's not just another class; it's a pathway to the future, leading directly to Materials Design and Technology in upper school.

TECHNOLOGIES – HOME ECONOMICS

YEAR 9

TTX9 S1 FUN WITH FABRICS

This is a practical course which allows students to further develop practical and creative skills using Textiles. Students will design, construct and embellish personal textile items. This course will focus on the production of non-apparel items. Projects may include a personalized cushion cover, zipper pouch, soft toys and other textile items for a teenager's room. The aim is to design and produce items they love and can use.

Please note: Students may need to provide some fabrics and patterns.

TFW9 FOOD AROUND THE WORLD (choose one semester only)

An appreciation of a wide variety of foods from Asian and European cultures will be developed in this subject. Students will be involved in preparing everyday meals and some special foods from a number of different countries. Students will gain knowledge about different customs and cultures from various countries and develop a wide range of food preparation skills. Examples may include dumplings, curry puffs, rice paper rolls, Pandan Cake, Black Forest Cake.

TTX9 S2 FASHION CREATION

In this course students will learn about textile embellishment and manipulation techniques to design and construct textile items. Students will have the opportunity to learn about fashion and develop creativity through designing and producing fashion garments, including their own set of Peter Alexander inspired PJs. We will use the sewing machine and overlockers to produce items students can use or wear. Students will learn decoration and embellishment techniques (for example: tie dye and machine embroidery) that they will apply to their projects.

Please note: Students may need to provide some fabrics and patterns if they wish to vary the projects.

TFF9 FAB FAST FOOD (choose one semester only)

Teenagers love to eat! So let's learn how to cook great tasting food that's quick to prepare and even better for you than packet and fast food. Students can taste test a range of different foods and trial new products to learn about what influences their food choices. Students will make tasty recipes suitable for different times of the day, like pancakes, burgers, pizza and desserts. A highlight of the course is getting to participate in TV inspired cooking show challenges to design specific dishes.

YEAR 10**TBW10 BEAUTY AND WELLNESS (choose one semester only)**

This subject is focused on teenagers with an emphasis on how to make the most of their physical, social and emotional self. Some of the topics to be covered include skin and body care, hairstyles, make-up application, nail art, nutrition and cooking, exercise and relaxation and general well-being and is made more interesting with practical sessions, guest speakers and exercise incursions.

This course is suitable for students who are keen to pursue a career in Beauty related areas as well as those who wish to focus on their well-being to develop their creativity, or just purely for pleasure.

TCH10S1 CHILDREN AND FAMILIES

Through an emphasis on practical activities, students will explore the stages of child development from conception to primary school. Activities will include building an understanding of the way children develop and how you can help facilitate proper care and development of infants, toddlers and children. Practical activities may include cooking and textiles with a focus on making toys, room decorations and meals for expectant mothers or young children. This subject provides valuable background information for the Senior Secondary course, Children Family and the Community.

TTX10S1 TEXTILES AND DESIGN

The aim of this course is to provide students with an understanding of the practical and creative aspects of textiles. They will learn how to use and follow commercial patterns in the construction of a personalised embellished Hoodie. Students will be encouraged to express creativity in all their textile projects. Skills and projects in this class are student driven and will be different from those in Semester 2.

This course is suitable for students who are keen to pursue a career in a textiles related area as well as those who wish to learn a craft for relaxation and balance in their lives, to develop their creativity, or just purely for pleasure. Study of this course will be beneficial for completion of Year 11 and Year 12 Materials Design and Technology (Textiles).

Please note: Students may need to provide some fabrics and patterns, if they wish to vary the projects.

TFS10S1 FOOD SCIENCE

If you love eating, this is the subject for you! In this elective you will make a range of popular dishes and learn the impact your food choices have on your body. You will improve your cooking skills, explore different techniques such as thermal cooking and gain some useful life skills. We will explore nutrition concepts and taste test many products to allow you to make good eating decisions. Highlights of this course include food design challenges, planning the ultimate family meal and developing your own meal kit. This subject is a recommended pathway for students considering Year 11 and 12 Food Science and Technology.

TTX10S2 FASHION AND FABRICS

Students will have the opportunity to learn about fashion and develop their creativity through designing and producing fashion garments of their own choice. Students will learn to use and follow online tutorials and adapt commercial patterns to suit their body shape. They will learn about decoration techniques that they will apply to these projects and will develop the technical skills and techniques required in the construction of these garments. Skills and projects in this class are student driven and will be different from those in Semester 1.

This course is suitable for students who are keen to pursue a career in a textile related area as well as those who wish to learn a craft for relaxation and balance in their lives, to develop their creativity, or just purely for pleasure. Study of this course will be beneficial for completion of the Year 11 and 12 Material Design and Technology (Textiles).

Please note: Students may need to provide some fabrics and patterns.

TCF10S2 CELEBRATION FOODS

Food should be fun! In this course you will learn how to make food a little different from the everyday foods you usually eat. In this elective we will focus on food that looks amazing enough for you to serve at gatherings and special occasions. You will learn to style food and produce foods suitable for parties, grazing boards, dessert buffets and meals to celebrate with. A highlight of the course is using BBQs and decorating your own cake. Next time you are with your family and friends you will be able to whip up something they will remember!

TFG10 GASTRONOMY (choose one semester only)

Gastronomy blends physics and chemistry to transform the tastes and textures of food. The result? New and innovative dining experiences. The term Molecular Gastronomy is commonly used to describe a style of cuisine in which we explore culinary possibilities by borrowing tools from the science lab and ingredients from the food industry. Gastronomy seeks to investigate and explain the chemical reasons behind the transformation of ingredients, as well as the social, artistic and technical components of culinary and gastronomic phenomena. Examples of practical work may include chocolate work, fruit spheres/caviar and honeycomb.

TFC10S1 CAFE FOODS

Explore the culture of Café Foods. Students will investigate and make the types of foods found in eateries around Australia. They will investigate different styles of café foods, including Dessert bars and Tapas style food. This course is suitable for students with an interest in working in cafes and restaurants as well as those who enjoy eating out. Completion of this course would be beneficial for students interested in choosing Certificate II in Hospitality in Year 11 & 12.

TIF10S2 INTERNATIONAL FOOD

Travel the world through food! Explore the world through its diverse food and associated customs. In this course you will explore the culture and food from a diverse selection of foreign lands. You may make traditional dishes from selected countries such as USA, Mexico, Japan, Malaysia, Spain, France, Thailand, Morocco and Sweden. The highlight of the semester is an international dinner party challenge and a street food design task.

ARTS – MEDIA

YEAR 9

MED9 S1 ANIMATION AND ADVERTISING

Make objects and drawings come to life! This course explores the worlds of animation and advertising. There is an emphasis on the styles of flipbook and pixilation animation and TV advertising. Students will use digital cameras, computers and industry standard editing software. They will be given the opportunity to create their own examples of each of these media forms.

MCC9 S1 MEDIA CODES AND CONVENTIONS

Film and Television language is universal, and once learnt a filmmaker has the ability to transport their meaning to filmmakers around the world. In this course, students will examine the importance of codes and conventions for constructing meaning in the media. They will examine still and moving images and learn the language that can be used to interpret the media text.

MED9 S2 FILM GENRE

Want to make your own short film? Bring your creativity and enthusiasm to this course where you will learn how to turn your ideas into a short film worthy of the big screen. Our enthusiastic teachers will introduce you to a variety of skills you need to produce your own masterpiece. The first term will build your storytelling, filming and editing skills and processes, ready for the major film production in the second term.

MSS9 S2 STARS AND STEREOTYPES

Film and television programmes rely on the audience easily identifying characters as the hero and the villain. But how is this achieved? In this course, students will examine the power of the scriptwriter in creating these easily identifiable stereotypes in different genre and the power they have over the audience's interpretation of the media.

YEAR 10

MED10S1 FILM-MAKING

Want to make your own short film? Our enthusiastic teachers will introduce you to a variety of skills you need to produce your own masterpiece. Bring your creativity and enthusiasm to this course where you will learn how to turn your ideas into a short film worthy of the big screen. The first term will build your storytelling, filming and editing skills and processes, ready for the major film production in the second term.

MMM10S1 MEDIA MANIPULATION

Media works have the ability to manipulate the narrative and production conventions to present a particular point of view to the audience. In this course, there will be the opportunity to analyse professional works that present varying perspectives of historical events. Class discussions will explore the bias presented in such media works.

MAR10S1 and MAR10S2 MEDIA SPECIAL EFFECTS AND REALISM

Media Special Effects and Realism is an editing masterclass for beginner and advanced students, looking to better their skills using Adobe After Effects and Premier Pro CC. The courses will cover technologies used in both fiction and non-fiction media such as green screen editing, advanced motion tracking and CGI. Students will be introduced to realism in Hollywood film, where they will learn how advanced editing and CGI is used to help audiences suspend their disbelief. Typical production tasks will give students the opportunity to create their very own action scenes. This unit can be chosen across both semesters.

MED10S2 NON FICTION MEDIA: DOCUMENTARY

As part of this course, you will use media technologies to produce your own documentaries. You will learn about the different types of documentary films and how they can manipulate the way we see the world to prepare you to produce your own masterpiece. We will build your filming and editing skills through a number of smaller tasks and activities before you make your final extended production.

MVA10S2 VALUES AND AUDIENCES

Why are MARVEL superhero films so popular at different times? Film and Television producers create media works based on the pervading values of the perceived audience. In this course, students will explore the audience values reinforced in films and television shows from a particular time period. Through analysis, audience values systems will be explored and the power of the media in conveying meaning will be determined. Assessment weightings favour written tasks.

ARTS – PHOTOGRAPHY

YEAR 9

PHO9 S1 PHOTOGRAPHY

This course is an introduction to the magical world of photography. You will discover the processes of traditional cyanotype prints using the sun as a light source. Students will be introduced to basic DSLR camera skills focusing on using the manual settings to control light. The images you create are displayed and evaluated, with a focus on personal expression and technical skills. The course is highly practical and you will gain a basic understanding of the elements and principles of photography as an art form.

PHO9 S2 PHOTOGRAPHY

In this course, you will develop and broaden your digital black and white film photography skills using the cameras internal filters. This is a highly practical subject and you will be experimenting using different imaging skills whilst using professional photographic equipment, you will plan your own photo shoots. Set tasks will explore a range of topics while enhancing your skills and knowledge of photographic composition. You will be creating images for presentation or a specific audience. Beginner and experienced photographers are welcome.

YEAR 10

PHO10S1 PHOTOGRAPHY

This course will nurture your creativity introducing you to famous photographers that will inspire and influence your work. A practical course that involves a series of set tasks that develop your photographic skills, knowledge of cameras, studio procedures and design. You will explore digital photography utilising *Photoshop*™ to produce images that are unique and demonstrate control and understanding of photography as an art form. Amateur and experienced photographers are welcome.

PHO10S2 PHOTOGRAPHY

This course will provide you with the opportunity to refine and extend or start your journey of photographic knowledge and techniques. You will be looking at the work of famous photographers within art movements. Creativity and imagination are encouraged and you are given considerable freedom within each task to develop your individual style as a photographer. Although still a highly practical course you will be guided through demonstrations and lectures to deepen your knowledge of photography as an art form. This course will strengthen any skills you have developed in any previous arts courses. Amateur and experienced photographers are welcome. This course would be an excellent choice if you intend to study visual art, media, design or photography in senior secondary ATAR or General courses.

ARTS – DANCE

YEAR 9

DCA9 S1 CIRCUS

This course will involve learning how to incorporate the spectacular arts of tumbling, balancing, and working with a range of equipment such as juggling balls and unicycles. Circus and acrobats uses partner/team work to build trust in your fellow classmates, combining the best aspects of sport, dance, gymnastics and performance together. It will teach you the fundamental skills to develop your technique in a range of styles as well as teaching you the key skills of choreographing your own material. No previous circus experience is necessary to take this course. You will have the opportunity to perform to a live audience.

DAN9 S1 DANCE

Year 9 dance focuses on the basic and fundamental skills of various dance genres including Jazz and Funk. This course will take you on a journey of how you can dance to some of your favourite tunes. It will teach you the fundamental skills to developing your technique in a range of styles as well as teaching you the key skills of choreographing your own material. No previous dance experience is necessary to take this course. You will have the opportunity to perform to a live audience.

DCA9 S2 CIRCUS

This course will involve learning how to incorporate the spectacular arts of tumbling, balancing, and working with a range of equipment such as juggling balls and unicycles. Circus and acrobatics uses partner/team work to build trust in your fellow classmates, combining the best aspects of sport, dance, gymnastics and performance together. It will teach you the fundamental skills to develop your technique in a range of styles as well as teaching you the key skills of choreographing your own material. No previous circus experience is necessary to take this course. You will have the opportunity to perform to a live audience.

DAN9 S2 DANCE

This course will expand your knowledge and skills from the previous course. You will learn sequences in the style of Jazz, Funk and Hip Hop as well as fine tuning your own choreography. Research in class will see you analysing the current dance trends and evaluate the work of Australian dance crews. Beginner and experienced dancers welcome. You will have the opportunity to perform to a live audience.

YEAR 10

DCA10S1 CIRCUS

This course will involve learning how to incorporate the spectacular arts of tumbling, balancing, and working with a range of equipment such as juggling balls and unicycles. Building on knowledge from the previous course, this course aims to start combining acrobatic and equipment skills. Circus and acrobatics uses partner/team work to build trust in your fellow classmates, combining the best aspects of sport, dance, gymnastics and performance together. It will teach you the fundamental skills to develop your technique in a range of styles as well as teaching you the key skills of choreographing your own material. No previous circus experience is necessary to take this course. You will have the opportunity to perform to a live audience.

DAN10S1 DANCE

Dance is music made visible. This course will take you on a physical journey extending your repertoire of skills in a range of styles, including Hip Hop, Jazz, Funk and Contemporary. You will sequence sophisticated choreography using a range of choreographic devices to engage an audience. You will have the opportunity to perform live on stage for audience. Beginner and experienced dancers welcome.

DCA10S2 CIRCUS

This course will involve learning how to incorporate the spectacular arts of tumbling, balancing, and working with a range of equipment such as juggling balls and unicycles. Building on knowledge from the previous course, this course aims to start combining acrobatic and equipment skills. Circus and acrobatics uses partner/team work to build trust in your fellow classmates, combining the best aspects of sport, dance, gymnastics and performance together. It will teach you the fundamental skills to develop your technique in a range of styles as well as teaching you the key skills of choreographing your own material. No previous circus experience is necessary to take this course. You will have the opportunity to perform to a live audience.

DAN10S2 DANCE

This course will bring out the expression within your dancing, expanding on all aspects within the dance course. You will have the chance to refine your Hip Hop and Contemporary technique. You will sequence sophisticated choreography and will have the opportunity to perform to a live audience. Beginner and experienced dancer's welcome.

ARTS – DRAMA

YEAR 9

DRA9 S1 DRAMA

Make them laugh!!! This course is all about comedy and learning how to make your audience laugh. The focus of this course is on the theatre style of Commedia del Arte. This course will support you to build your confidence and explore improvised comedy where your characters behave outrageously wearing masks that you design and make. Building on the skills you've learnt in Year 8, you will be unleashing your inner clown. End the semester by presenting your work to family and friends at the dance and drama night!

DRA9 S2 DRAMA

It's time for heroes and villains...How melodramatic are you? In this course overacting can be a positive. You will refine your acting skills, get costumed up and perform in different styles of comedy where being overly dramatic is celebrated. End the semester by presenting your work to family and friends at the dance and drama night!

YEAR 10

DRA10S1 DRAMA

Semester one Year 10 drama begins with a look at the history of theatre. You will understand some different drama styles throughout history, taking an in depth look at the world of Absurdism, before performing in groups in your own absurdist piece of theatre. We then look at some post 1960s Australian scripts. Students will study their choice of Australian text, then rehearse and perform this to the class. Finally, students are encouraged to devise an extended improvisation based on a theme from their chosen script. End the semester by presenting your work to family and friends at the dance and drama night!

DRA10S2 DRAMA

Now let's create our own theatre! No point in performing if you can't be seen...so you'll learn the tricks of the trade to light your plays in creative ways with our lighting systems. You'll take a quick trip back in time to Ancient Greece to see where it all began and then create your own fully realised performances. End the semester by presenting your work to family and friends at the dance and drama night!

ARTS – VISUAL ARTS

If you are considering doing Visual Arts in Year 11 and 12 it is strongly recommended that you complete a variety of the courses offered in both Year 9 and Year 10.

YEAR 9

ART9 S1 ART

This art course focuses on you working in the way an artist might work, developing your drawing skills, creative thinking and self-expression through art making. You will be introduced to established artists and use their practice to inspire you to create your own artworks. You will have the opportunity to work within a variety of mediums over the semester. You will produce drawings and mixed media work, investigating painting techniques and processes, culminating in the creation of a final painting.

ART9 S2 ART

This art course will extend your knowledge and skills developed in Semester 1. While you do not need to have completed Art before, it would be an advantage to have an interest in art. You will focus on developing your drawing skills, creative thinking and self-expression through art making in the way an artist might work. This will be at a slightly more challenging level than previous courses and you will begin to develop your personal style and sense of meaning in art. You will produce drawings, investigate ceramic techniques, and process and explore concepts for 3D design culminating in a final clay sculpture.

YEAR 10

ADA10S1 DESIGN ARTS

Design is all around us in this very visual world. In this course you will be learning how to add to it in highly skilled and thoughtful ways. You will learn how to design your own lettering font. You will have the opportunity to utilise a variety of digital and traditional mediums/techniques during the application process. You will develop a stencil and create a spray-painted mural to be digitally placed within situation. You will work to a specific design brief creating audience-based works. Taking into consideration inspirational graphic and design works, you will develop your own refined products. This course would be advantageous if you are considering Design ATAR in Year 11 or 12.

ADA10S2 DESIGN ARTS

With the increasing interest in the way things look in this world, design is a key career path. In this course you will respond to a design brief and follow a design process to redevelop/redesign an existing logo and marketing material for a brand and develop a Storybook with illustrations. You will examine and reflect on other artists work using this knowledge as a reference to improve you own work. This course would be advantageous if you are considering Design ATAR in Year 11 or 12.

AFN10S1 FINE ART

Do you want to learn how to draw and paint? Have something worthy to show off on social media or put into an art exhibition? This course is focused on developing high quality skills and confidence as an artist. The tasks will introduce you to a variety of art materials and processes including drawing with pencil and ink, dry-point etching, and acrylic painting. You will have the opportunity to develop ideas that express your beliefs and values with a focus on representation and meaning, culminating in a resolved artwork – a large painting using acrylics. You will take inspiration from different artists, discovering how and why they create their artwork, to help inspire your own art making. You do not need to have completed any art courses before, however, showing an enthusiasm for the subject along with a basic understanding of the elements and principles of art with some drawing skills would be an advantage. This course is highly recommended to prepare you to work in Year 11 and 12 Visual Arts ATAR courses.

AFN10S2 FINE ART

Do you want to learn how to level up your drawing skills and develop unique ideas that you can take into clay? Create something worthy to show off on social media or put into an art exhibition? This course is focused on the further development of your ideas and skills as an artist. You will build on 2D art skills, drawing in different mediums such as charcoal and ink, and explore printmaking techniques such as mono-printing. You will explore different 3D materials and methods resulting in creating a 3D artwork in clay. You will develop the ability to research and develop your own ideas, making a high quality resolved artwork that express your viewpoint and ideas. You will take inspiration from different artists, discovering how and why they create their artwork, to help inspire your own art making. You do not need to have completed any art courses before, however, showing an enthusiasm for the subject along with a basic understanding of the elements and principles of art with some drawing skills would be an advantage. This course is highly recommended to prepare you to work in Year 11 and 12 Visual Arts ATAR courses.

ASC10S1 SCULPTURE

In this course you will be focusing on the funky and unusual, taking inspiration from artists who push the boundaries of functional ceramics and make fun everyday objects you can use at home. You will undertake observational and expressive drawing techniques to inform and develop your own ideas and designs. This will result in a final resolved artwork of a ceramic teapot and teacup and saucer set from clay. This course is recommended to prepare you to work in Year 11 and Year 12 Visual Arts General courses.

ASC10S2 SCULPTURE

In this course you will be focusing on fun hyper-realistic giant sculptures of doughnuts, sweets and cakes. Taking inspiration from artists who create large scale sculptures and sculptural installation. You will undertake observational and expressive drawing techniques to inform and develop your own ideas and designs. This will result in a final resolved artwork exploring the use of clay to make a series of fun and colourful mini desserts, and exploring the use of paper mâché, armature and frameworks to create a large-scale food sculpture. This course is recommended to prepare you to work in Year 11 and Year 12 Visual Arts General courses.

THE ARTS - MUSIC

ARTS – Music

Music at Churchlands Senior High School provides the opportunity for students to be part of a diverse community with similar interests and talents. The benefits of studying Music have been scientifically proven to improve general health and well-being, improve resilience, help with personal organisation and promote social cohesion. Music is also a creative outlet that encourages the development of neural pathways.

As a **GATE** music school, students (both in the General and Special Music Course) receive a Kodály based music education of the highest standard available in the state. All Music students take part in several performances throughout the year. These may include the ANZAC Day March, concerts at the Perth Concert Hall and performances with guest artists and conductors who are renowned internationally and nationally.

At the end of Year 8, **GATE** Music students must enrol into the **four** period **Special Music Course**. **General Music** students should enrol into the **two** period **General Music Course**. Highly motivated General Music students, achieving good grades, are considered for the **Special Music Course** after discussion with their class music and instrumental teachers.

COURSE CONTENT

SPECIAL MUSIC COURSE

Musicianship:	Kodály based ear training and music theory.
Music Literature:	Students develop music analysis skills studying a range of musical styles, drawn from Western Art Music, Jazz and Contemporary contexts.
Performance:	Students select either a Western Art Music or a Jazz focus. <ul style="list-style-type: none"> • Concert Practice: Students whose focus is Western Art Music, perform in front of their peers to develop critical listening skills. • Jazz Improvisation: Students whose performance focus is Jazz, study improvisation techniques and develop Jazz language and performance skills, working independently and collaboratively in group rehearsals.

Students must be receiving regular weekly instrumental **OR** vocal lessons either through the school or privately **AND** attend choir and ensemble rehearsals and **ALL** scheduled performances as appropriate for their instrument or voice to remain eligible for enrolment in the music courses.

Evidence of private lessons is required each semester.

CAREER POSSIBILITIES

Further studies in careers such as: Musician, Composer, Music Teacher, Music Therapist, Music Journalist, Sound Engineer, Recording Assistant, Administration Assistant, Community Music Activities Administrator, Music Administrator and Music Producer.

ASSOCIATED COSTS

- The cost of participating in the Special Music Course is \$135.00 per year.
- The cost of participating in the General Music Course is \$125.00 per year.
- This cost includes an ensemble levy of \$15.00 per year for the purchase of scores for the instrumental and choral ensembles and \$28.00 towards the cost of choral accompaniment.
- Music students are expected to purchase a complete concert uniform through the Churchlands SHS Uniform Shop.

Instrumental students hiring an instrument through the school must pay a \$150.00 levy to cover the costs of maintenance and repair to the instrument. This is payable **ONLY** by students hiring an instrument through the school.

Percussion students must pay a \$30.00 levy to contribute towards the repair, upkeep and replacement of instruments.

Voice students must pay a \$25.00 levy to contribute towards the cost of resources, repertoire and choreography.

Students may attend performances by professional groups relevant to their studies. Typical ticket prices may be around \$25.00 per performance. While students are strongly encouraged to attend, it is not compulsory.
